

Acknowledgements

This course would not have been possible without the co-operation, support, encouragement, kindness, hard work, perseverance and generosity of many people:

- Sir Philip & Lady Brenda Willmott-Sharp from the Independent Group Limited in Port Moresby who have provided one of us (DW) with financial, logistical and moral support for many years while in pursuit of snakes and snakebite research in Papua New Guinea.
- Oil Search Limited (particularly Ross Hutton & Ruth Waram) for their kind and generous financial support of snakebite research in PNG, including this course and the production of this Course Handbook.
- CSL Limited (particularly Tim Carroll) for their kind and generous financial support in funding the snake venom detection kit workshop.
- Dr Timothy Pyakalyia, Deputy Secretary (Technical Health Services) at the National Department of Health who has supported and encouraged research into snakebite and facilitated much of what has been achieved.
- Dr Simon Jensen, Senior Lecturer in Emergency Medicine at UPNG who has worked around the clock to organise the course and to help write and edit the Course Handbook.
- Dr Kenneth Winkel, Director of the Australian Venom Research Unit at the University of Melbourne, and President of the Australasian College of Tropical Medicine who has helped enormously in making this course possible.
- The members of the teaching faculty not already mentioned: Dr Antony Chenall from St Vincent's Hospital in Melbourne, Dr Gertrude Didei from Modilon Hospital in Madang, Dr Aaron Limbo from Port Moresby General Hospital, Dr Evelyn Lavu from UPNG, Mr Benjamin Bal from the Gulf Province Health Department in Kerema, Dr John Vince from UPNG, Dr Bill Nimorakiotakis from the Australian Venom Research Unit in Melbourne, and Ronelle Welton from James Cook University in Townsville.
- Dr Mathias Sapuri (Dean), Dr Andrew Masta (Acting Dean), and Dr Harry Aigeeleng from the School of Medicine & Health Sciences at UPNG, as well as Mrs Claire Matainaho and her colleagues from UPNG's MONAHP office who have donated their time to act as our support staff.
- Dr Andrew Dent from St Vincent's Hospital in Melbourne for opening important doors.
- Dr Simon Mete from the Port Moresby General Hospital for enabling us to visit the Emergency Department and Intensive Care Unit facilities.

Finally there has to be a very personal thank you to the many rural health workers across Papua New Guinea who have helped with the research into snakebite that one of us (DW) has undertaken over the last four years. The experiences of rural snakebite problems and the many enlightening conversations we have had together are what lead to the concept of a dedicated training course in snakebite management being offered to frontline health officers.

David Williams
